

# CASE COSTING

SurgeOn Case Costing enables users to determine procedure costs and the profitability of cases. This essential information can be manipulated in a variety of user-defined methods, making it a powerful management tool.

**What-If Analysis** provides five different scenarios to analyze a potential increase in monthly overhead and decrease in insurance reimbursement. Users can also track physician time and material costs.

**Physician Cost Comparison** allows centers to examine a single physician's cost per case versus the total cost among all physicians based on the actual OR times recorded in the system.

SurgeOn Case Costing encourages physician performance and provides valuable information for negotiating managed care contracts.

## HIGHLIGHTS INCLUDE:

- Procedure and physician comparatives and analysis
- Estimates or actual procedure costs
- Combines all variable and fixed procedure costs that are part of the procedure
- Compare costs with revenue analysis to determine profitability
- Reviews of average cost per case based on overhead, materials, extended care, direct staff, and time
